

Passwords are Key!

A strong password is the key to your castle.

Length

At least 12 characters long: the longer your password, the harder it is to crack.

Complexity

Combine upper/lower case, symbols, and numbers to create a unique password that's hard to crack.

Singularity

Have a separate password for all of your accounts. If one account is compromised, the others will stay secure.

Password managers

Consider using a password manager to securely keep track of your passwords.
